3	5	233	300		70	

completed booms
From April 2019 the boom swivel position is made adjustable using boom track slide item 104-SWVL. This allows you to place the swivel at the optimum position for your boat. Use the aft hole for the swivel line – use the forward hole for the Cunningham line. Alternatively you could use SAILSetc item 120D, the headsail boom swivel with ball race. This is the preferred option for No 2 and 3 rigs. It keeps the boom low to the deck while allowing it to rotate with little friction.
